

Proposal

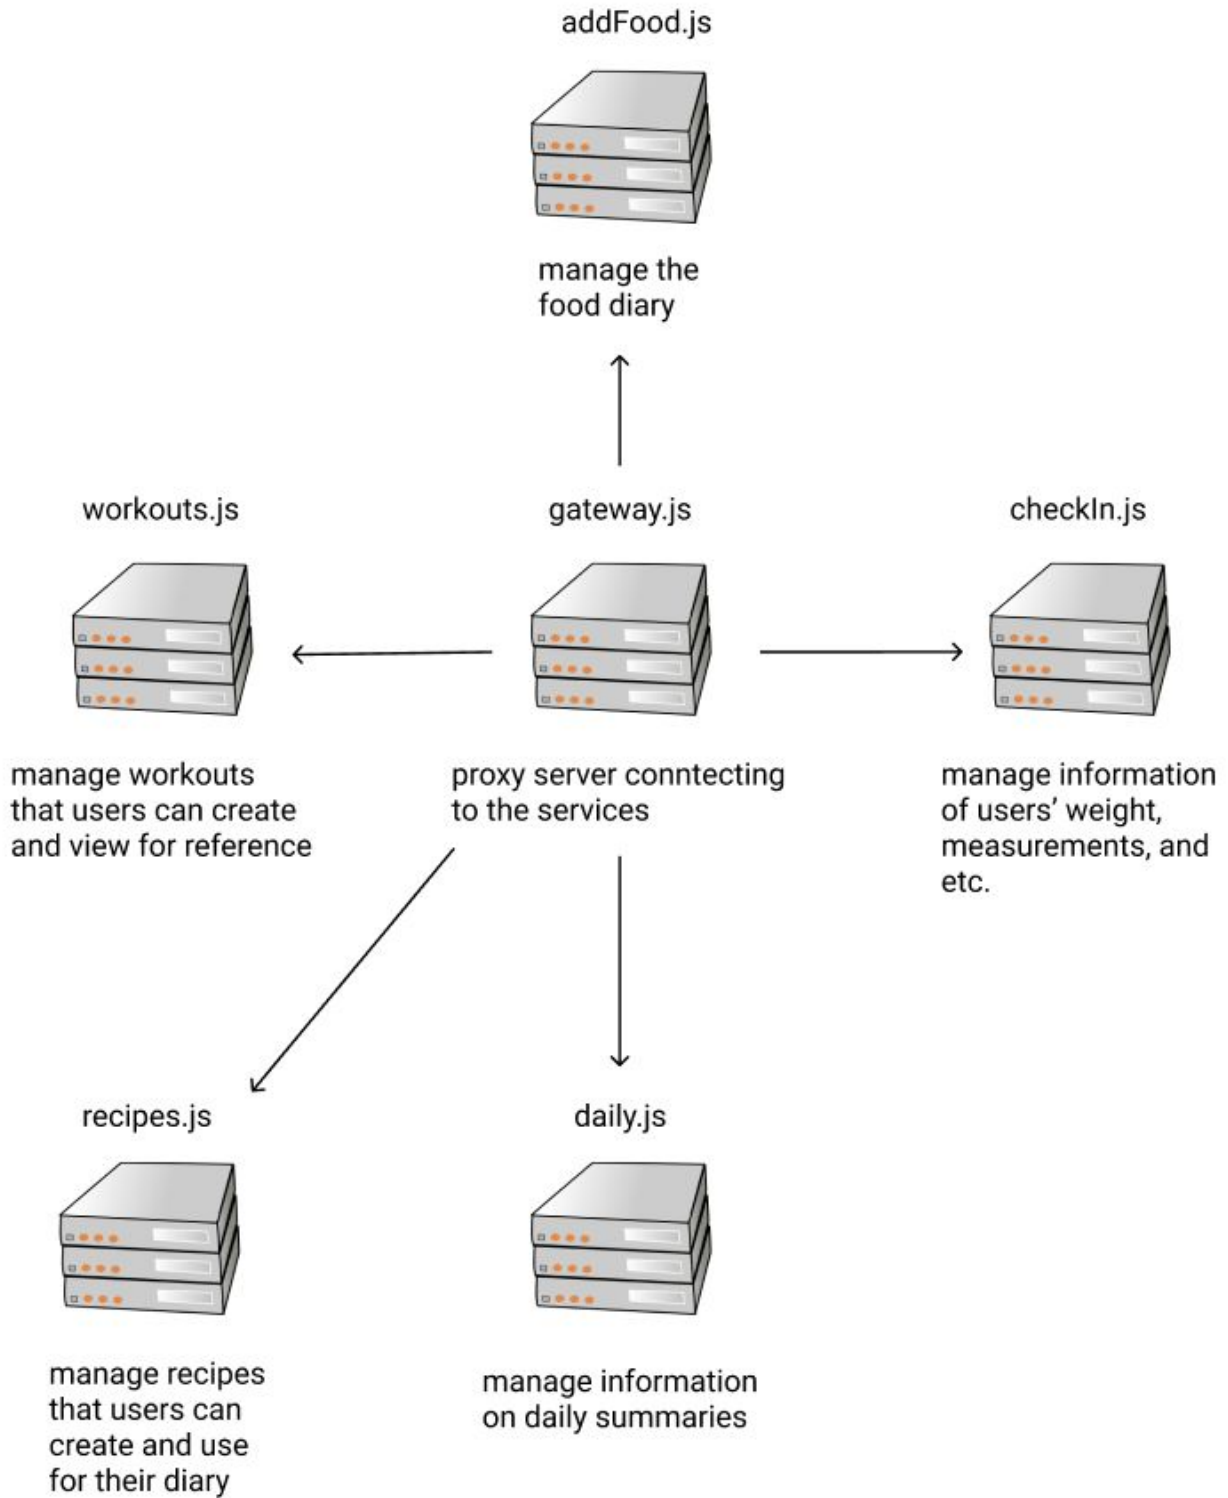

Create a "Food Diary App"

- Check in:
The app manages information of users, and stores user's personal information like: 'weight', 'age', 'height', 'other measurements', etc.
- Recipes:
Manage user daily food recipes, ingredients
- Daily Ingestion:
Summary for user daily information(Breakfast, Lunch, Dinner, Snack)
- Workout:
Record daily exercise

Using microserver to manages different categories data for each user

1. Add Food:
 - Add user daily meal's calories
2. Workouts:
 - Daily workout calories expended
3. Recipes:
 - Allow user to create custom recipes to quickly add meals and share meals

Architecture

UI MockUp
